

# Lucerne

## Stebbing

### Private Clients

A full application for the erection of a replacement dwelling, garage, workshop and comprehensive landscaping scheme at a property known as Lucerne.

The aim of the proposal was to provide an exceptional, eco friendly, high quality family dwelling. The layout and scale was developed with great care and consideration to the site's location on the outskirts of Stebbing. The strategy involved presenting the new scheme as an overall comprehensive composition, comprising the new home, separate workspace building and extensive landscaped grounds.

The accommodation has created a home that goes beyond standard ideas, and is an architectural solution inspired by layout, location and function. Inspired by the Japanese Kindergarten designed by Takaharu Tezuka.

The concept of the building has core elements from cutting edge design. These include clean lines, open spaces and a minimalist approach, which all help to emphasise natural light through large windows whilst still blending with the setting.

The house also incorporates outdoor family space in combination with a stunning interior in a functional layout. The landscaping was designed to compliment and flow with the surroundings and form of the house.

Landscape Strategy - Sophie Smith Ltd.

PROPOSED SOUTH ELEVATION - 1:100

Elevations - Andrew Stevenson Associates
